How to disable Android settings

Anytime Telecare™

Android Settings for the Anytime Clinician App

- Some Android devices have an automatic setting that can affect access to Apps.
    - This setting is called Remove Permission if App is unused.
        - Go to Settings > Apps > Anytime Clinician > Permissions to view notification permissions.
        - Confirm **"Remove permission if app is unused"** is toggled off
    - Once this has been done, please clear your cache as well:
        - Go to Settings > Apps > Anytime Clinician > Storage.
        - Tap on Clear Cache.

    - The video below will show you how to disable this setting and how to make sure the notifications for this App are properly enabled.
        -
